LOC Málaga, Spain

PORTFOLIO
& ONLINE CV

PROFILE

Full Stack developer with two years of experience building internal business applications for an e-commerce and industrial company of 15–30 people. I work across the full cycle: requirements analysis, solution architecture, API integration, deployment and maintenance on Linux/Plesk. I am also responsible for the company's Information Security Management System and have taken on technical coordination of the development team.

PROFESSIONAL EXPERIENCE

Innovate Powering Electronic, S.L. (INNPO)

MÁLAGA, SPAIN · 2024 – PRESENT

E-commerce and industrial company in electrical energy storage (industry, renewables, IoT, e-mobility, geolocation and medical). Trades under its own brand and as bateriasonline.com, one of the highest-traffic online stores in Europe in its sector. 15–30 employees.

Full Stack Developer

2025 – Present

- Development and maintenance of the **in-house logistics platform** (Laravel + JavaScript), which brings shipment tracking for six carriers into a single system, replacing the need to check each carrier's website separately, for a volume of around 5,000 orders per month.
- **Event-driven synchronisation layer** between the Prestashop store and the logistics platform, keeping order status aligned across both systems.
- **Integration between the internal management system (Dolibarr) and the accounting software**, removing the need to enter the same data in two separate platforms.
- **AI-based customer support automation** through chatbots and integrations, covering around 400 enquiries per month, of which close to 80% are resolved without human intervention.
- **Owner of the company's Information Security Management System (ISMS).**
- **Technical coordination of the development team** over a three-month period, with a team of five (three of them interns): planning, technical definition of solutions, code review and support for junior profiles.
- **Administration of the company's infrastructure** on Linux and Plesk: deployments, domain management, SSL certificates and environment maintenance.

Software Developer – Dual Vocational Training & work placement

2024 – 2025

- Development of custom **Prestashop** modules and of features on **Dolibarr ERP**, adapting both platforms to the company's processes.
- First internal applications in **Laravel and PHP**, in daily use by 10 to 15 people across logistics, administration and sales.

Aerodynamics Academy

2022 – 2023

IT Trainee – Dual Vocational Training & work placement

- Maintenance and repair of Alsim 250 flight simulators, computers and peripherals.
- Domain and user administration in Google Workspace, and network infrastructure setup.
